**6. Studio Greytak** introduces the Harvest Moon Lamp. Featuring a softly illuminated, hand-blown glass orb above a base of slumped glass, citrine and agate, the 26-in. tall luminaire is inspired by the full moon at the Autumnal Equinox. This celestial art piece produces 450 lumens and is fully dimmable.

## SPOTLIGHT Sylvania

**Sylvania**, in partnership with **QuarkStar**, introduces the Concord Equinox, a lighting solution that aims to reinvent how downlights can be used to illuminate office, hospitality and retail applications. Providing both direct and indirect illumination via QuarkStar’s light-refraction technology, the luminaire remains the size of a conventional downlight, delivers up to 2,500 lumens, and produces a light distribution with a Unified Glare Rating (UGR) of less than 19; the unique halo effect is a result of the light refraction. Available with trim and trimless options, the fixture also provides end users with a choice of two position settings: extended (top) or non-extended (bottom)—which helps to avoid the cave-like effects of conventional downlights.
